

FOR IMMEDIATE RELEASE

Community Fibre and Glemnet partner on new fibre solution for London's businesses

Technology service specialist chooses Community Fibre to provide full-fibre to customers

LONDON, 7 November 2019: Cloud based telephony systems and IT services provider Glemnet today announces its partnership with full-fibre broadband firm Community Fibre to bring gigabit speed broadband to its customers.

Glemnet has chosen Community Fibre's fastest option, the Gigafast offering, which offers speeds of 1Gbps and 10Gbps – the 1Gbps offering being 18 times faster than the current UK average –, starting from £299 per month, based on a three-year contract.

By partnering with Community Fibre, Glemnet is able to focus on providing customers the best possible solution and service experience from its core business offering, while offering the fastest true full-fibre broadband connection in London.

Community Fibre's wider rollout plan for businesses has enabled firms such as Glemnet to provide full-fibre broadband to customers in areas where previously unavailable such as South London.

Glemnet is an independent provider of cloud-based telephony systems, IT and cloud services, business internet and business services to the public and private sector, servicing the space for 20 years.

Neil Linter, CEO of Glemnet, says:

"We are thrilled to be able to bring the B2B market such a compelling full-fibre business broadband offering and help businesses of all sizes with their internet requirements."

"We look forward to working with Community Fibre to bring best of breed fibre services to our existing and new customers."

Graeme Oxby, CEO of Community Fibre, says:

"We are excited to be working with Glemnet to roll out the fastest 100% full fibre offering in London to businesses across the capital."

"Our network is built to service 40k London's businesses with fibre connectivity up to 10 Gbps. As we continue to expand our b2b partner programme, we look forward to launching this new offering alongside Glemnet, whose customers will now benefit from access to our high-speed broadband, alongside the vital telephony and IT systems and services they receive."

About Glemnet

Glemnet is an independent service provider of cloud-based telephony systems and IT services to businesses in the private and public sector.

Its team has a wealth of knowledge and experience deciphering the perfect solution for different communication needs.

Glemnet works hard to bring the latest, most cost-effective Internet, Cloud, Unified Communications and mobile technology to our customers, together with exceptional technical service.

Glemnet wants customers to be more productive and efficient, free to work from anywhere, with any device, at any time, safely and securely.

Established in 2001 as an independent service provider, Glemnet has offices in London and the South East.

About Community Fibre

Community Fibre is on a mission to bring world-class internet services to Londoners. Whilst a large proportion of the capital is offered some of the poorest and slowest broadband services in Europe, the company is at the forefront of making London a Gigafast city.
