Not all fibre broadband is the same

Unlike most “superfast” broadband providers who still use a combination of fibre optic cable from the data centre to the street cabinet (FTTC) and then old copper phone wires from the cabinet to your building, Community Fibre offers something different.

Community Fibre build and maintain their own dedicated fibre optic network straight into your business premises, known as Fibre to the Premises (FTTP), using ONLY fibre optic cable, for the fastest, most reliable connection you can get.

Don't let unreliable broadband affect your business.
Fibre-To-The-Premises is the solution.

Higher speeds

Quicker cloud access

Increased reliability

Less stress

A winning partnership

Community Fibre is an award winning broadband provider that builds, owns and operates its own dedicated fibre optic network. We have so far enabled 200,000 premises in London with our 100% full fibre network, adding more every day to reach one million households and businesses by 2023.

Glemnet, established in 2001, is an independent managed service provider for Communications, Connectivity, Cloud, IT and Cyber Security solutions for the private and public sector.

We have partnered with Community Fibre to bring exceptional full fibre business broadband connectivity to our existing and new clients based in London.
